

**Design choices (scatterplot):****Dataset:**

- I chose this dataset, because as a linguist, I am (obviously) interested about linguistic data and I figured there'd be some connection between the three variables. (linguistic diversity makes formal schooling more difficult, for example).

**Colours:**

- For the LDI I chose to use the colour green, for no other reason than that I needed some kind of scale and there were already hex codes for the scale available at the website.
- There's no real reason to pick any colour over the other, so I figured green would be just fine.

**Extra html page:**

- Every time I explained what I was doing, I had to explain what the LDI actually IS, so I decided to add a little page explaining it.
- I could probably have used a tooltip to make a little window with an explanation appear, but that's more complicated and I didn't have the time to implement that.

**Legend:**

- The legend has an ugly header, but it works so I'm not too bothered.
- I wanted to make a gradient color bar but I couldn't figure out how.
